

RB50A

Semi-automatic balancing machine

Applications

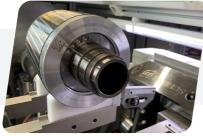

Features

- Semi-automatic balancing machine able to balance the entrire range of rotors for electric motors weighing up to 25Kg in a completely automatic mode on two planes (dynamic).
- This machine is specifically developed to balance the rotors for the electric transmission on the automotive field.
- The unbalance are corrected by axial drilling to remove material on the lateral discs or on the lamination stack.
- Rotor loading/unloading is manual but the machine can be easily equipped with industrial robot or linear pick and place making the RB50A a fully automatic balancing machine

Technical data		
Parts max weight:	25 kg	
Parts max diameter:	160 mm	
Unbalance measure speed:	Programmable	
Cycle time:	< 80 s	
Dimensions (LxWxH):	2000 x 2130 x 2150 mm	
Weight:	2400 kg	
Power supply:	380-480 V three-phase 50/60 Hz	
Compressed air:	6 bar	
Controlled by:	Industrial PC	

Options
Industrial vacuum cleaner for removing drilling chips
Teleservice
Calibration master
HW & SW interface for customer's loading/unloading device
Tool monitor
DMC reader
